[Tick Counter Located At The Current Bar](#)
[Download](#)
[★★★★★](#)

Version: 1.0
Exported with NinjaTrader 8.0.14.1 64 bit.

Simple Tick Counter modification to the one included with NinjaTrader 8 that replaces the one located at the bottom right of the screen and places it next to the current bar.

The size of the text is determined by the font size you have set for the chart. The color is also automatically set based on the text color settings you have set for that chart.

This is my first indicator modification, please let me know if you have issues importing.

Exactly what I was looking for! However, it would be nice to be able to select the font,

font size and color. In NT7, I use a smaller font size than what is set for the chart and

when bored while waiting for a trade setup, I am always adjusting my charts appearance.

CenTexFishTDiv

Download

This indicator gives a choice for drawing the divergence lines for FisherTransform and also for the MacDhistogram.

I want to give all the credit to Cory who made it possible for the FisherTransform to have the divergence lines work in this indicator. I added the ability for the indicator to count how many times divergence's occur because its handy sometimes to see how different time periods affect divergence.

Quantismo 😊

thanks AMEN 😊

TimeSlot

Download

Hello Traders, there are several reasons to mark certain times. Perhaps you like to mark the 30 and 60 minute time slots, the open of the market, the volatility slots or news releases. This indicator will paint from your start time to your end time. You can have several instances with different times and different colors and opacity.

I have used this indicator through several instances of NT 8 and several bar types with no issues. This was compiled on NT8 V 14.2

Let me know how you are using it.

Trade Well...
Bob

The only way to make this even better is to allow multiple time slots in one indicator. T

his would prevent us from having to load the indicator multiple times. If that already do

es exist maybe I'm just missing it!

July 26th, 2018 12:50 PM **topdogtony** ★★★★★
thanks will try this out.....😊😊

wow this is very helpful as i too tend to forget the news event while placing trades.

July 13th, 2018 01:39 PM **jmont1** ★★★★★
Thanks BobC - will help warn me just before market opens and news. I sometimes get in tra

des without realizing the time.

[More...](#)

[Download](#)

Hello Traders, there are certain time slots during the day where the volatility increases. This could be due to news releases at certain times or institutional adjustments after the 'morning meetings'. This indicator is a modification of the ATR indicator that makes the average of the ATR 1 (range of one candle) and allows you to set how many candles back to evaluate. For simplicity the candles in the pic are set to 60minutes and the 4 instances of ATRback are set to look back 23, 46, 69, and 92 candles (1,2,3,4 trade days back) so you can spot the time slots where the range of the 1 hour candles tend to increase. Another application might be to set the lookback in intervals of a week, so you would be looking at that day of the week 1,2,3,4,weeks back.

This indicator has worked on several instances of NT 8 and several bar types. It was exported using NT8 v14.2

Let me know how it works for you...

Trade Well...
Bob

This indicator is SO USEFUL, it practically lets you know precisely when, historically, pr

ice goes nuts!! I love it!!

Volume - Colored Based on Volume

A Volume bar is colored the Volume Subgraph Primary color if its volume is higher or equal to the previous bar volume.
A Volume bar is colored the Volume Subgraph Secondary color if its volume is lower than the previous bar volume.

[Connors RSI \(amaConnorsRSI\)](#)

Download

★★★★★

Version 1.0 March 6, 2017

Created by Larry Connors, this indicator is a composite of three separate components. Two of the three components utilize the Relative Strength Index (RSI) calculations developed by Welles Wilder in the 1970's, and the third component ranks the most recent price change on a scale of 0 to 100.

In effect, the three components combine to form a momentum oscillator. The output value between 0 and 100 then identifies short-term overbought and oversold conditions.

Thanks again!

[BarTimerPro](#)

Download

★★★★★

June 20th 2018 v1.0

This Indicator displays the duration of the current bar. Tested and works on time, tick, volume and range bars.

- Font Color
- Font Select
- Show Bar Timer Label
- Hide Indicator Name
- Show all tabs

I'm self taught and just starting to understand what's required to convert my NT7 indicators over to NT8 so let me know if this can be improved.

No matter what I change in the settings, the counter doesn't appear on my chart. I have t

ried on both volume and tick charts. I also agree with earlier suggestion change this to

Count Down not Count Up. Hopefully, you can correct this.

June 28th, 2018 01:21 PM **Harleking** ★★★★★
Nice Indicator.

Just one minor thing: Is it possible to have the bartimer count down instead of counting u

p?

Download

NT 8 Market Replay data for CL

Contract: CL 06-18

Download instructions:

download and unzip file in NT 8 replay folder
Documents\NinjaTrader 8\db\replay.
The file will create a folder with the relevant front month and
a series of .nrd files inside (one per day)

Make sure to use the "extract here" function as shown, and not the "Extract to" function, to avoid the creation of a folder within a folder.

Note: this is Market Replay data for NinjaTrader 8. The format is different from NT7.
