### [Prior OHLC Day, Week & Month MTF AIO V1.1](#)

 [Download](#)

★★★★★

#### Prior OHLC Day, Week & Month MTF AIO V1.1

Updated to RC1 Sep 2016: Do not delete or comment out !BarsArray[0].IsIntraday since this is a safety check to make sure you do not use on a >= Daily chart.  
Rather, change to !BarsArray[0].BarsType.IsIntraday or download this new update.

#### Will work on Renko bars

\* Plots prior Open, High, Low & Close.

\* Daily, Weekly & Monthly all in one (AIO).

\* [Uses minute data behind Renko charts](#) to plot accurate levels.

\* Has a button you can use to show/hide the plot.  
So you can plot several indicators per chart and hide them when not needed 😊

\* Can use solid lines.

Update April 2016:

Minor code update to prevent plotting/rendering issues.

Remember this is for Beta, so please PM me for bugs or fixes.

[Traders Dynamic Index](#)

[Download](#)

Updated with bug fixes by Sim22.

A comprehensive but helpful indicator that uses RSI (Relative  
Strength Index), its moving averages, and volatility bands (based on  
Bollinger Bands) to offer traders a full picture of the current market  
situation.

Input parameters

RSI\_Period (default = 13) — period in bars for calculation of RSI.  
Recommended range is 14 or 21.

RSI\_Price (default = PRICE\_CLOSE) — price type to use in RSI  
calculation.

Volatility\_Band (default = 34) — period in bars for volatility bands calculation. Recommended range is between 20 and 40. The

[Thanks](#)

May 20th, 2018 02:31 AM **fido** ★★★★★

May 6th, 2018 08:23 PM **datahogg** ★★★★★

lower the value the more sensitive the band.

StdDev (default = 1.6185) — standard deviation multiplier for volatility bands. It is not recommended to change this parameter.  
RSI\_Price\_Line (default = 2) — period of the first moving average (fast) of RSI.

RSI\_Price\_Type (default = MODE\_SMA) — type of the first moving average of RSI.

Trade\_Signal\_Line (default = 7) — period of the second moving average (slow) of RSI.

Trade\_Signal\_Type (default = MODE\_SMA) — type of the second moving average of RSI.

For scalping, enter long when the green line is above the red line and enter short when the red line is above the green line.

For short-term trading, enter long when the green is above both the red and the yellow lines; enter short when the red one is above both the green and the yellow ones.

For medium-term trading, go long under the same conditions as for the short-term trading but only when all lines are below 50; to go short — the same but above 50.

Mind the blue volatility band as it points to the long-term trend strength and volatility when wide. Steep green line changes also signal short-term market volatility.

Thanks.

Thanks

- \* Both cumulative delta and bar delta.
  - \* BidAsk.
  - \* UpDown Tick.
  - \* UpDown Tick with continuation.
  - \* UpDown One Tick with continuation.
  - \* Gom Hybrid.

Also other options:

- \* EOD/ new session reset to zero.
- \* Inverse delta - plot the 'Limit' orders.
  - \* Size filter.
  - \* Candle outlines.

**Make sure you enable [Tick Replay](#) to use this historically! You will not need Gom recorder for this.**

However, Tick replay will not work with some Renko bars due to `RemoveLastBar()` 😊

Thanks to Zondor for his 'unGom' conversion.

Please report bugs to me via PM rather than in the comments. Thank you.

[Value Charts V1 NT8b9](#) [Download](#) ★★★★★

### Value Charts V1 NT8b9

Promoted by David Stendahl in  
'Dynamic Trading Indicator: Winning with Value Charts and  
Price Action Profile'.  
Popularized by the Hubert Senters from TTM.

Stendahl says:  
"Value Charts use  
dynamic volatility units to effectively adjust to changing market  
volatility."

Concept:

The value chart is divided into zones.  
4 to -4 is fair value. Avoid buying/shorting here.  
4 to 8 is overbought/expensive.  
-4 to -8 is oversold/good value.

Strategies are to fade the Value Chart extremes in a choppy market,  
and to buy dips (-8) in an uptrend.

PDF of Stendahl interview included in .zip file, so **you must extract the file first before importing!**

[More...](#)

[Relative Strength V1 NT8b9](#) [Download](#) ★★★★★

## Relative Strength V1 NT8b9.

Measures [relative strength](#) between two instruments.

\* Includes 3 formulae:

[Tom Dorsey](#)

[Mansfield/ Weinstein](#)

[Investor\RT](#)

\* Includes option to start at a fixed date. Option to start from high or low of this date.

### Known limitations:

\* Will only work on time-based or EOD bars.

\* Intra-day session times may differ between symbols so please take this into account.

\* Will not currently use fixed date intra-day.

\* Smoothed function is not available on fixed date.  
(These may be available at a later date).

\* I have opted not to multiply the Dorsey formula by 100. He states the results are easier to read but I do not think they reflect the true ratio.

I have tried to test all scenarios but let me know if you find a bug.
