[TradeTimerPro - NT8](#) 

May 31st 2018 v1.0  
This Indicator displays the time elapsed since last execution. Tested and works although I am still on NT7 so any feedback welcome.

- Font Color
- Font Select
- Show Trade Timer Label
- Hide Indicator Name
- Show all tabs

I'm self taught and just starting to understand what's required to convert my NT7 indicators over to NT8 so let me know if this can be

improved.

Thank you for your time on this indicator.

June 20th, 2018 11:04 PM [jmонт1](#)   
Shuglu, very glad you decided to learn to code. Great indicators.

June 7th, 2018 03:23 AM [zohar](#)   
thanks 😊

### Z-score (amaZScore) Download

Version 1.3 September 25, 2017

The **Z-score** or standard score is a numerical measurement of a value's relationship to the arithmetic mean of the data set. The Z-score is the signed number of standard deviations by which the current value of a data point is above the mean value or below the mean value as calculated for the selected lookback period.

For a normally distributed sample 95.8% of the z-scores of all data points fall within the range [-2, +2]. A Z-score of 0 indicates that the data point is identical with the arithmetic mean of the data set.

The Z-score is a normalized oscillator that can be used to identify extreme readings of the input series. The Z-score is calculated by dividing the absolute difference between a data point and the arithmetic mean by the standard deviation.

One of the main applications of the Z-score is that it can be used to normalize any oscillator. For example, the MACD is a non-normalized oscillator which does not pass the c-test introduced by William Eckhardt. However, when the Z-score is used to normalize the MACD, the resulting oscillator uses a normalized scale and will pass the c-test. The normalized MACD is obtained, when the MACD is used as the input series for the Z-score.

### BetterBrick ChartStyle Download

This is the NinjaTrader 8 version of the BetterBrick ChartStyle, which is especially useful in conjunction with the BetterRenko Bar Type.

You can find the discussion thread here: <https://futures.io/elite-circle/4978-better-renko.html>

History:

v1 20100807 - @Aslan created to go with BetterRenko  
v2 20100812- @Aslan changed to paint OHLC bar for live bar  
v2 20150719 - @Dalebru converted to NT8. Exported with NinjaTrader 8.0.0.5  
v2 20170102 = @shanmugs added missing "Open" line  
v2 20180306 - @DaleBru changed ChartStyleType enum value that conflicted with recent NT8 update  
v2 20180409 - @DaleBru exported with NinjaTrader 8.0.12.0

## 7ZIP Market Replay.CL 04-18 (NT8)

Download

★★★★★

NT 8 Market Replay data for CL

Contract: CL 04-18

Download instructions:

download and unzip file in NT 8 replay folder  
Documents\NinjaTrader 8\db\replay.  
The file will create a folder with the relevant front month and  
a series of .nrd files inside (one per day)

Make sure to use the "extract here" function as shown, and not the "Extract to" function, to avoid the creation of a folder within a folder.

**Note:** this is Market Replay data for NinjaTrader 8. The format is different from NT7.

## BVA Version 2

Download

★★★★★

BVA Version 2 (Bar Volume Accumulation), is for spotting  
Divergences in Volume and Price Action.

Example:  
Higher High with less BVA, upward trend is losing momentum.  
Lower Low with less BVA, downward trend is losing momentum.

Version 2 has current and historical values included for use in back  
testing and strategies. The rest of the code is the same as Version 1  
that's posted in the Elite Download Section.

Note:  
The plot values for testing have been set to transparent. If you want  
to see them on your chart, you must select a color for each plot.

Compiled using NT 8.0.12.0 64-bit (Multi-Broker)

## Multi Reverse EMA (REMA) Download ★★★★★

Exported with 8.0.12.0 64-bit

**Minor Update** -- Remove Print statement as noted by bobc635, thanks 2/2/2018

This is the NT8 version of NT7 MultiREMA which is described in full in the NT7 section [here](#). There are no additional features or enhancements.

The indicator will be installed in a folder "Cheech". The REMA indicator will be installed in the Indicator folder.

**Note:** The default alpha setting for the Trend Plot is set to 0.1 to match the REMA setting as supplied by Ninjatrade. The default setting for the NT7 version for the same plot is 0.05 as was indicated in the article. Adjust accordingly.
