★★★★★

PriceLine V2 NT8.0.2 with timer

This price line has been morphed with the NT8 bar timer.

- * You can use the timer on time-based, tick or volume bars.
- * I have made a custom price marker that attempts to emulate the default NT8 price marker. (You can use this AddOn for your own indicators as well).
- * Set a threshold value to warn you when the timer exceeds the threshold value.
- * Choose the ZOrder to enable plotting behind or in front of the bars.
 - * Choose opacity of the line.
- * Set to plot the [tick size thickness to use on Footprint charts](#). (These are not included).
- * The timer and priceline colors are automatically set to the data series/instrument price marker so you must change this within the data series menu.
- * Set the length to: Fullscreen, margin only, fullscreen minus margin, your length or timer only.

Notes:

- * The timer will plot only whilst you are connected.
- * The time-based timer is set off your system clock, so make sure this is correct.

Thanks a lot. Have you posted the sim22_footprint indicator ?

September 2nd, 2018 02:39 PM [abh8](#) ★★★★★
You have shown Sim22_FootprintV1. I did not find this footprint from your postings. Can yo

u please let me know if it is available to download ? I like the gradient coloring of the

footprints. Thanks a lot for all your posts.

You can download this video [here](#) to show you through the options.

Hello Traders, Rev 2...An astute trader found a slight oversight in the code. The line size went to a fixed width if history was not enabled. I have fixed this. Thanks Aregon!

Rev 1...I have enhanced the capabilities a little. Now you can name the event. In the example, I have the CL Pit Open, the Equities Open and the CL Pit Close. I hope that this is useful for you...

Bob

Hello Traders, Here is an NT8 indicator that marks the pit open, or any other time based event such as a news event or inventory report or the like. It paints a horizontal line from the event and extends for x hours. Since the time can be set, you could use several instances of the indicator for the Open, News Event or whatever you like. You have the Option of turning the text on or off and the option of printing historical events. Since the indicator uses a synthesized 1Minute time base, you can put it on virtually any chart type and the time-price mark will always be correct. I use it for the CL Pit Open

and important news events.

This is Rev 1. I added Line Width control

Trade Well
Bob

 **BT Opening Range Indicator**

 **Download**

★★★★★

I found this somewhere on the F.IO or NT forums and someone helped me convert it to NT8. You can set the start times and end times of the opening range and save them. Okay I received some comments about this indicator so I thought I would share them. I was told it is not always precise when plotting on a tick or volume chart. It may be because the begin / end time is not exactly at the open or the close of the bar. It works fine on minute charts. It may not work well for timeframes higher than 30 minutes. I am not a coder, but the author of this indicator is here:

<https://twitter.com/bearishtrader> and
<http://bearishtrader.blogspot.ca/>

May 13th, 2017 03:18 AM **blueocean** ★★★★★
Thanks! I would like to see it automatically draw Fib

extensions at set intervals each day

for opening price with options to see those levels, maybe up to 7 or 10 total.

Lean and mean. Nice.

December 19th, 2016 03:26 AM **ztekino**

December 18th, 2016 07:04 PM **xtremer**
I appreciate your work and sharing. Thanks!

This is just the TSSuperTrend in the NT7 section converted to NT8. It was compiled in NT8.0.2.0. It is possible in this version to choose different plot colors, also to switch the plot, arrows, bar coloring and alert sounds on and off independent of each other. I have incorporated the code for adaptive mode in this version rather than have the separate homodyne discriminator. Please let me know of any problems.

March 10th, 2017 11:03 AM **NGtrader**
The coding in this indicator causes memory leak issues when I use it. I take it off my ch

arts and my memory use for Ninjatrade returns to normal instead of going up to 2 gb.

February 9th, 2017 11:32 AM **teresa**
great - thanks a lot!

January 19th, 2017 09:45 AM **mozola**
Thank you for this excellent indi, we use it as a trailing stop ("attach to indicator" fun
ction).

[More...](#)

Dec 19th 2016 Version 1.1

fixed a minor bug (error on close of chart showing up in log)
added icon for the button: thanks to mk77ch for providing the code and the icon.

the attached icon toggle.png must be copied to the Ninjatrade 8 Folder (usually .../Documents/NinjaTrader 8)
If the icon is found it will be used if not we will fallback to TextMode in the menubar.

INSTALLATION: Please unzip the zip first. It contains the toggle.png and the Ninjatrade archive for import.

Dec 16th 2016 Version 1

This Indicator adds a button to the ChartMenuBar which allows to quickly show/hide trade executions on the chart.

I took the idea from NT7 Indicator created by Whitelight on FIO and build for NT8.
This is version 1.0.

Installation is done via the normal Tools -> Import -> NinjaScript AddOn Function.

Works only on NT8; Tested / Created on NT 8.0.2.0

great indicator, thank you!

December 17th, 2016 09:54 PM **Aregon** ★★★★★
Many thanks !!

jWilliams2 - Williams %R Smoothed

Download

This is the Williams %R indicator with JayMA smoothing. Williams %R is a momentum indicator designed to identify overbought and oversold areas. By adding JayMA smoothing, we have a quick yet smooth version of this popular indicator.

Originally added by BigMike, I've converted it to NT8.
