 Thanks, Trader SC. Useful indicator. Good of you to share.

April 8th, 2017 12:35 AM **SDR2014BMT** ★★★★★
 Quality of life improved- thanks!

Delete your NinjaTrader 8 cache

Download

Run the console app to delete all files and folders within the 'NinjaTrader 8> db> cache' folder.

The NT8 data cache folder saves pre-formatted data to suit your bars types, the purpose of which is to enable faster startup times. Sometimes in certain circumstances your chart bars will be full of errors, so it doesn't hurt to clear the cache once in a while, or every day if you are having issues.

Use only if you are having problems with data, tick replay indicators or if you have modified your bars types.

This will **NOT** make a backup of your cache files, so use carefully! It WILL, however, check for NT8 being open and advise you as such. It WILL check for your cache folder being empty and advise you as such.

This was built using an English speaking culture on Windows 10. It directs the delete command to: 'yourDocumentsFolder\NinjaTrader 8\db\cache'. This will not work on XP. Although I have tried to use code to work on all cultures, I have not tested it as such.

Thanks to **bobc635** for suggesting this simple concept.

Tips:

- * Extract the file to the desktop and run from there.
- * If you wish to see inside the .exe file just download a free decompiler like [DotPeek](#).

This is great, thanks so much. I've been amazed at what a complete rip off the Forex bid/a

sk spreads are. Where I would have been making \$350 with the same price move in the future

s markets, I am at a \$25 loss or so in Forex. It is so important to choose the right marke

DValue Area Profile Indicator

Download

This is a conversion of the DValueArea developed by Ben L. and originally coded for the NinjaTrader 7 platform by DeanV. I found it on the Ninjatrader Support Forum, converted by Ninjatrader Support.

It shows the developing value area and POC, also pre-session. Profile types are VOC, TPO, VWTPO and VTPO. You have the option of showing a realtime POC.

Please contact the original author for any questions or comments.

★★★★★

EdsLevel2Dom_V2.0.1

A simple histogram indicator of depth of market (DOM) data also known as standing, limit and stop orders. Displays along side the price scale with a handy adjustable margin to avoid other price scale indicators. Written for simplicity and speed of execution. A performance test has been added to evaluate the Refresh Delay parameter.

This is EdsLevel2Dom_V1.0 (NT7) rewritten for NT8.

As at NT8.0.4, Feb 2017, Ninja Trader LLC has been struggling to contain errors and memory leaks on some indicators. It may not be the code itself but something internal within NT8. It seems to be due to the multi-threaded nature of NT8, ie. multiple cores being used to make calculations. In regards to 'memory leaks', I refer to NT8 sharply escalating it's use of memory, causing NT8 to crash eventually. This is often caused by objects in code being created in one thread and the indicator goes looking for it in another thread.

Please be patient and use indicators carefully, especially on tick replay.

The way to monitor/help your NT8 is thus:

1. Hold down Ctrl & Alt and then press Delete. This will open up your task manager. You can observe NT8's memory usage. If you see NT8 memory sharply increase then you may have a 'memory leak'. You should shut it down by clicking on NT8 in the task manager and then 'End Task'. Keep in mind this will not save your latest workspace.

2. Keep your 'Log' tab open to see for any warnings. They will usually appear in orange. If you have an OnRender DirectX warning then chances are NT8 will have a memory leak and will crash a period of time later. Shut down as above.

3. I always open NT8 now with ONLY a simple workspace (all else should be closed) with only a couple of naked minute/tick charts on it. Connect to your broker, let the data load, then open your complicated workspaces. This seems to solve most memory leaks. The change from Historical state to Realtime seems to cause NT8 some grief with the OnRender method.

I do feel that NT8 has kept us in the dark with communication, so that's why I'm giving you some tips that work for me. I'm interested if you have any other ideas that work for you 😊

Download

★★★★★

MacdBB V4.0.2 NT8.0.4 + gradient + pullback setting

22 Feb: Fixed alert message. Added file selector for sounds.

Includes:

- * Paint bars.
- * Candle outlines.
- * Paint background of panel and chart.
- * Standard option.

* **New pullback option.** If the dots are above/below the average then the dominant trend colors the dots.

* Gradient option with improved gradient methods.

* **Radial gradient** 'bling' for your dots.

* Custom audio alert.

* Gapless option. Use intraday to ignore the opening gap. Useful for determining the opening trend.

* Chart signals for entry and exit, based on crossing of the zero line, average or bollingers.

* **New SignalIntSeries** using +1 for uptrend, -1 for downtrend to use in your strategies.

* **Choice between standard deviations or mean absolute deviation (MAD).**

** I plan to make a version soon that will accept several smoothers for calculation and I'm looking into Text to Speech for audio alerts, something NT should have done.

Make sure you extract the .zip file first to show the files. Inside you will find the .zip to import!

Make sure you insert the included audio files here: C:\Program Files (x86)\NinjaTrader 8\sounds

All new coding done according to NT8 best practices [here](#).

As usual, let me know if something ain't quite right.

Regression Channel with fixed start V2 NT8.0.2 updated

 Download

★★★★★

Regression Channel with fixed start V2 NT8.0.2 updated

Updates::

Update V2.1.0 22 Jan=>

- * Bug fix: On some occasions when using fixed start the LRC would not adjust accordingly.
- * Made text messages more readable and less intrusive. (From feedback....thank you).
- * Added option for a start marker. (From feedback....thank you).
 - * ZOrder adjustment - place behind or in front of bars.
- * For coders: 'Friendly' names enums - no more camel case enums!

Update V2.0.2 Jan=>

- * Added Mean Absolute Deviation thanks to 'spooz2'

Note: Make sure you have >= [NT8.0.3.1](#) for the button to work without issues.

Included with this LRC:

- * [Ability to start the LRC from any bar of your choosing](#) via a button.
 - * Directional coloring.
 - * Bands
- * Four different price marker displays: Price, Standard deviations, ticks from the middle line, regression slope per ticksize (which enables you to compare the slopes of other instruments)
 - * Decimal places formatter....adjust to your liking.
- * Ability to use Raff channels as shown [here](#) in TASC Oct 1991
 - * [You can use on any indicator](#) 😊
- * Unlike the NT8 version, you can scroll backwards and the LRC [will plot the past](#).

Note:

If using the LRC fixed start feature you will have to manually refresh the chart by pressing F5. This is the compromise of using an indicator instead of a drawing tool.

You can download the two videos [here](#) and [here](#) for setting up options.
