 Nice first try.

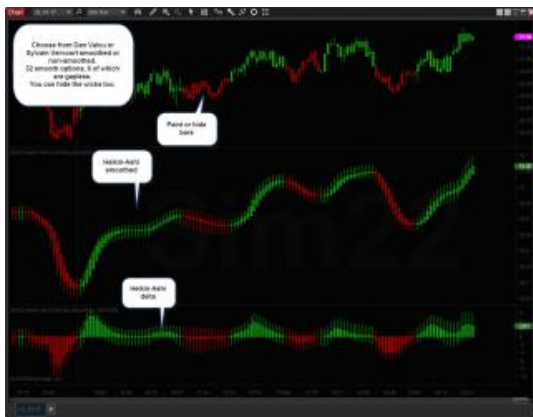

-- Use LLMA by Aslan instead. --

Same indicator, but better code.

Heikin-Ashi Smoothed and Delta NT8.0.2 V1.1 Update

Download

Heikin-Ashi Smoothed and Delta NT8.0.2 V1.1

Update V1.1 Dec 16: Forgot to add Try-Catch statements. You should download this version for 'safety' reasons. Also fixed bug whilst using in the market analyzer.

This is a port of FatTails NT7 indicator, with some additions of my own.

You will find:

1. both [Dan Valcu's](#) and [Sylvain Vervoort's](#) smoothed and original versions.
2. 32 kinds of smoothers, 6 of which are 'gapless'. (Thanks to Rayko for uploading all the 'au' smoothers) at the NT forums. ([This includes a gapless Jurik MA that works on TickReplay](#)).
3. Heikin-Ashi delta as well (It plots in ticks rather than points) . Just select 'Delta' and set to another panel besides your instrument one.
4. Hide the chart bars or paint them.
5. Hide the wicks.
6. Most will work on TickReplay.

Appreciate it!

[More...](#)

 [Delta Package V3 NT8.0.2 with COT, HA and strategy sample code](#)

 Download

Delta Package V3 NT8.0.2 now with commitment of traders (COT) and heiken-ashi

Update Feb 2017: Changed "Show above / below EMA colors" to false to avoid confusion.

Minor fix 30 Dec: Added ability to change bar width manually. Note, if you have any custom built strategies using DeltaV3 then you will have to adjust your code as per the strategy sample included.

New: Sample code for use in a strategy is included. The strategy does not do anything, it simply shows how to access the delta values. It works, I've tested it. Make sure you use TickReplay on your host chart if you want historical values accessed within a strategy.

Includes everything from V2 [here](#) as well as these additions:

1. **Commitment of traders:** high, low and total.
2. **EMA plot:** Set to normal, gapless and reset at session open.
3. **Heiken Ashi:** Chose from the algorithms of Dan Valcu (standard) or Sylvain Vervoort.
4. **Painbars** based on delta values or above/below the ema.

Plus general improvements.....

Make sure you enable [Tick Replay](#) to use this historically! You will not need Gom recorder for this.

However, Tick replay will not work with some Renko bars due to RemoveLastBar()

*Occasionally if the bid/ask plots don't look quite right, especially if you haven't connected for a few days, make sure you right-click on the chart and select "Reload all Historical Data".

** Please report bugs to me via PM rather than in the comments. Thank you.

Here is a [picture](#) of how you can use delta for your trading.

I am not affiliated with this person or website, but you can get some ideas [here](#).

Excellent! Thanks so much for the share!!!!

December 18th, 2017 11:14 AM **mariohuegon**

Awesome, Thank you

December 3rd, 2017 05:41 PM **JTT8** 

Thank you!

September 21st, 2017 12:56 AM **NatalieRkn92**

Excellent work! Question though, for filter type does it filter OUT everything greater than

n or equal to or does it only show everything greater than or equal to my filter size

[More...](#)

 [ColorInputSeriesSlopeChanges](#)

 Download

I created a universal indicator that will alter the color based on slope change of "ANY" distinct, single-value dataseries in any panel.

To use this, you need to learn how to define the input series for the indicator (all done via the NT8 UI).

You can use "ANY" other available dataseries as input and the color change will be applied. No programming required; upper Bollinger band, lower Keltner band, HMA, TSI, MACD, etc... any indicator you have on your system can be used as the input dataseries for this indicator.

You need to understand how to change input series to use this indicator. This works the same as it did in previous Nijatrader releases.

Read up on this here for NT8

1.) go to control panel

- 2.) select help guide (F1)
 - 3.) open Operations by selecting arrow head
 - 4.) open Chart by selecting arrow head
 - 5.) select Working with Indicators document
 - 6.) open How to edit an indicator's parameters by selecting arrow head
- scroll to bottom of this display to read about changing indicator input series

Note, this feature is recursive meaning you can do this multiple times for example `ColorInputSeriesSlopeChanges(ema(volume))`

You can change the colors used, the defaults are Red (down), Yellow(same or peak), or Green(up).

Yellow can indicate values that are identical but it can also represent what I call Peak. The Peak value is the bar that is the apex of the slope change (ie from up to down). You can also toggle the display of Peak off or on.

February 15th, 2018 02:49 PM **nathans01**

im attempting to turn a wma into a slope color. Is this possible with this indicator? Could

you give me a bit more direction on how to do that.

November 18th, 2017 03:09 AM **InsideTheMarket**

Exactly what I was looking for. Thanks.

Am I able to use in strategy builder or code to test if the plot is currently Green or wen

November 8th, 2016 12:09 AM **FMTrader**

Thank you for this. Was looking for a slope colored EMA for NT8 and this is an even better

solution.

November 6th, 2016 10:04 PM **zohar**

Thank you dear friend to all of your indicators.

[Reversal Bars for NT8 \(BarType\)](#)

[Download](#)

This bar type creates a new bar when price reverses by a pre-defined amount of ticks from the high/low of the bar. As soon as a new bar is created and price moves at least the amount of pre-defined ticks in one direction, the bar again, closes after a reversal of pre-defined ticks.

Version: 1.0 | Nov. 2016

The Close Marker can be found [here](#).
