**NT 8 Market Replay data for CL**

Contract: CL 03-17

Download instructions:

download and unzip file in NT 8 replay folder  
Documents\NinjaTrader 8\db\replay  
 The file will create a folder with the relevant front month and a series of .nrd files inside (one per day)

Make sure to use the "extract here" function as shown, and not the "Extract to" function, to avoid the creation of a folder within a folder.

**Note:** this is Market Replay data for NinjaTrader 8. The format is different from NT7.

Also note, these downloads are likely not to include Sundays data.

folder within a folder.

**Note:** this is Market Replay data for NinjaTrader 8. The format is different from NT7.

Also note, these downloads are likely not to include Sundays data.

The format I used for this first file is .zip, but for all the subsequent files it's .7z which offers a better compression.

Thanks, but not sure the 'indicator folder' is a good location for these. We should move t

hese to some other place. It will become a real mess if we start to upload replay data in

the indicator area.

### LBR Oscillator

 Download

Shows the difference between fast and slow SMA. The dots show momentum from previous highs or lows.

Converted from LBR 3/10 Oscillator by Keith.

Enjoy!

### Fractal Pivots

 Download

Converted from NT7 Fractals\_Mike indicator. Based on this definition.

<http://www.investopedia.com/terms/f/fractal.asp>

Hope you enjoy!

UPDATE: 3/26/17 Fixed bugs where you could not save in a chart template and so its less sluggish on chart.

Its been brought to my attention this indicator may or may not use excessive RAM. Word of caution if you have issues using this indicator. I personally have not had issues besides sluggishness moving the x-axis.

PM me for issues.

Just watch the RAM go up up up steadily in Task Manager as you use this, until Ninnie cr

ashes. Every single point on each of those plots is a separate drawing object that KEEPS u

sing RAM from the time it is drawn until Ninjatrade shuts down. Or crashes.

Mar 17th 2017 Version 1

This Indicator displays the swing information at cursor position, useful for quickly gauging the current swing duration and distance in ticks within the Toolbar with options to customize including:

- Font Color
- Font Select
- Show Swing Information Label
- Hide Indicator Name

I'm self taught and just starting to understand what's required to convert my NT7 indicators over to NT8 so let me know if this can be improved.

### NT8 Workspace Startup tool

I built this little tool to help reset my \_WorkSpace.xml file.

Example of use:

Upon coding an indicator you forget to dispose of a resource so when pressing F5, NT8 crashes. The problem is NT8 will reload that last workspace....only to crash again....and again. You want to restart with another workspace loaded so you can fix the problem, right?

Well, the old and tedious way is to open your \_WorkSpaces.xml file, search for OpenWorkspaces and delete the entries, replacing them with one/some default templates. After doing this a hundred times...I decided enough is enough 😊

(I believe you can save load NT8 to do a similar job, but I like the flexibility of choosing my own workspaces to load.)

When NT8 is closed just run the .exe file and drag and drop which workspaces you want to load up upon the next restart. Instructions are inside the zip file. Do not import into NinjaTrader!

If you wish to see inside the .exe file just use any decompiler like [DotPeek](#).

[Center of Gravity / Polynomial Regression Channel / Belkhayate COG](#)

Download

★★★★★

This is the Belkhayate COG (Center of Gravity) indicator. Also known as a polynomial regression channel with 3 std deviations and many other names. I transported this code directly from [here](#).

If anybody has any useful information regarding the usability of the indicator I'd appreciate the feedback. The fact that it repaints takes a lot away from it, but here it is in case someone has use for it!

August 3rd, 2018 06:09 PM **Zephyr** ★★★★★  
I'm a HUGE believer in the Polynomial Regression Channel. If it's coded correctly, it's h

ighly predictive for support and resistance. I use 2 of them on my charts. One is longer

term (150 - 200 bars for daytrading), and one is short-term (50 bars). I only use upper a

Instant money maker when applied correctly.

May 27th, 2017 02:55 AM **romus** ★★★★★  
I am keen to see live results from trading it (about to test on some strategies in NT7) -

even though it repaints, but as long as highs and lows stay within extremes the results sh

ould be as per backtesting.

**ADXVMA Color Bands** Download ★★★★★

R2: 9/23/2018- I noticed a small error when displaying the Period in the title block.  
R1: 2/22/2018- I found an error in how larger user inputs were being handled for the volatility band multipliers. If you were using < 4 multiplier, then you will not see a difference.

Hello Traders, I have added color and Volatility (Keltner-esk) Channels to the popular ADXVMA. You can select your colors for an Up trend, Down trend or Neutral. The Keltner Bands can be colored and set to the multipliers that you prefer. In the picture, the ADXVMA is set to 5 periods and the bands are set to 1.5 for the inner band and 2.5 for the outer band.

Many Thanks to Zondor for the original NT8 coding of the ADXVMA.  
🙏

Trade Well  
Bob
