Thank you, day of the week is very important on my trading.

June 27th, 2018 02:03 PM **1973Hog** ★★★★★

Would really find this indicator useful when going back in time on the charts. However, I

get the following Error Message when attempting to import it. Yes, I have renamed the file

as suggested, but still no luck. Any help would be most gratefully appreciated.

May 20th, 2018 04:21 PM **bobc635** ★★★★★

Thanks... I did not realize how handy this is....

May 1st, 2018 04:33 PM **hautetoddy** ★★★★★

Nice. Thank you

 [Advanced Risk Reward Indicator Download Entry By bassam posted by NinjaTrader Jim on Ninja Trader Support Forum](#)

Exported using NT 8.0.9.0

Description

This is a port of the NinjaTrader 7 AdvancedRiskReward.v3 indicator by bassam. The original indicator can be found here.

Quote:

This indicator helps you define your entry, stop and target (1 or 3) visually on the chart with the help of horizontal lines, calculates your potential P/L ,unrealized P/L,Risk/Reward ratio and contracts sizing per account size.

 [Download](#)

Details: [Advanced Risk Reward Indicator Download Entry By bassam posted by NinjaTrader Jim on Ninja Trader Support Forum](#)

Submitted by: [teamtc247](#) [?]

January 22nd, 2018

Once started click on the chart 3 times there where you think your values will be appropriate , then shift the lines as needed and save the changes.

- Defines your Risk/Reward ratio using 1 or 3 targets
- Save & reload your values, be it minute, daily or weekly chart (One set of values per instrument)
- Interactive Mode: per-tick P/L based on the chosen contracts size
- Interactive Mode-Attached: per tick potential P/L
- Non-Interactive : Contract sizing is based on the defined risk per account size
- Hide/show the indicator as required & show/hide on start-up
- Extended or short lines

To Import

1. Download the attached file to your desktop
2. From the Control Center window select the menu Tools > Import >

NinjaScript Add On.

Thank you for this helpful indicator. I use it now everyday.

mahToolBar By Aligator

Download

★★★★★

"Indicator by : Aligator
/// Revision 0 - April 4, 2017
/// Revised April 16, 2017 by Woody Fox too include all Drawing Tools and Chart Markers
/*
The mahToolBar indicator installs drawing object icons in the NinjaTrader Main Toolbar for a one-click drawing.

This is a compilation of ideas and scripts from several people on this forum Including ChelseaB, Jessie, shuglu, and AlanP - Thank you all.

The toolbar is a selection of draw objects placed in the chart main tool bar to save chart space. Other available toolbar shortcut indicators around all plot inside the main chart area, and that seems to be a waste of the chart area.

I have included my favorites and the most frequently used draw objects by chart analysts. One can certainly add, with minimal effort, as many objects from the draw object dictionary as one wishes.

Individual draw objects can be selected and the user can choose any or all objects to include in the toolbar. Two icons (or objects) are very handy for changing the width of the bars by simply clicking on the icons.

The script can use some cleaning for more efficiency. Until someone comes up with a prettier and more efficient toolbar this one works great for me all day drawing lines, channels, fibs, etc.

Exported: NinjaTrader 8.0.5.2"

Multiple Moving Average Crosses (amaMultiMACross)

Download

★★★★★

Version 1.6 November 28, 2017

The Multiple MA Cross indicator plots a fast and a slow moving average and colors the area between the two moving averages. Both the fast and the slow moving average may be selected from a collection of over 30 different moving averages.

The indicator is primarily designed as a trend filter to show whether the market is in an uptrend or in a downtrend. The indicator comes with two different trend definitions - cross and thrust. The trend is exposed as a double series and can be accessed via the NinjaTrader strategy builder or the market analyzer. Directly accessing the trend via the market analyzer requires a separately coded market analyzer column, which is not yet included with the install file.

Trend definition "MA Cross": The current trend changes to

Keywords: [cross](#) [median](#) [movingaverage](#) [trend](#) [trendfilter](#) [slingshot](#)

[9 comments/ratings]

"uptrend" when the fast moving average crosses the slow moving average from below. The current trend changes to "downtrend" when the fast moving average crosses the slow moving average from above.

Trend definition "Thrust": The current trend changes from "downtrend" to "uptrend" with the first bullish thrust bar that plots above the upper moving average. A bullish thrust bar is a bar that closes above the prior bar's high and has a larger range than the prior bar. The current trend changes from "uptrend" to "downtrend" with the first bearish thrust bar that plots below the lower moving average. A bearish thrust bar is a bar that closes below the prior bar's low and has a larger range than the prior bar.

Moving averages available as fast and slow moving average:

- Adaptive Laguerre Filter
- ADXVMA
- Butterworth Filter
- DEMA
- Distant Coefficient Filter
- Double Weighted Moving Average (DWMA)
- Exponential Hull Moving Average (EHMA)
- EMA
- Gaussian Filter
- HMA
- Holt EMA
- Laguerre Filter
- LinReg
- Moving Mean TPO
- Moving Mean VWTPO
- Moving Median
- Moving Median TPO
- Moving Median VWTPO
- Range Weighted Moving Average (RWMA)
- Sine Weighted Moving Average (SWMA)
- SMA
- SuperSmoother
- TEMA
- Tillson T3
- TMA
- Triple Weighted Moving Average (TWMA)
- VWMA
- Wilder's Average
- WMA
- ZerolagHATEMA
- ZerolagTEMA
- ZLEMA

Applying the Multi MA Cross to indicators: The Multi MA Cross is designed to be applied to other indicators which may be selected as input series. However, some of the moving averages listed above will not support this feature. In case that a selected moving average does not support the feature the indicator will display an error message asking you to select a different moving average for the fast or the slow moving average. These are the moving averages that may not be selected when an indicator is chosen as input series: Mean TPO, Mean VWTPO, Median TPO, Median VWTPO, RWMA, VWMA, ZerolagHATEMA. These moving averages may only be applied to price.

Paint Bars: The MultipleMA Cross indicator comes with paint bars. The paint bars are colored according to the trend, where the trend maybe determined via the "MA Cross" or the "Thrust" option. The paint bars may be displayed without the indicator plots.

Delta Bars (NT8)

Download

This is a custom bar type which is based on the Bid Ask Delta (Ask Volume - Bid Volume). A new bar is created when the Delta is greater than a given Threshold-Value defined in the Data Series Properties.

The archive also contains a custom Delta indicator specially coded to work with this bar type.

Updates:

- Added a cumulative Delta Mode

Elder's Smoothed ROC

Download

The ROC Smoothed indicator is a modification of the ROC, as described in Alexander Elder's book Trading for a Living. It plots two lines: ROC, which is the difference between the current price and the price x-time periods ago, and SROC which is the difference between an MA of price and the MA of price x-time periods ago.

This oscillator avoids the major flaw of ROC. Smoothed Rate of Change compares the values of an exponential moving average instead of prices at two points in time. It gives fewer trading signals, and the quality of these signals is better.

Details: [Elder's Smoothed ROC](#)

Submitted by: [affoltes](#) [?]

December 21st, 2017
Size: 15.00 KB
Downloaded: 228 times

Thanks

Excerpt from the book "Trading for a Living"

To create S-ROC you must first calculate an exponential moving average of closing prices. The next step is to apply Rate of Change to the EMA. S-ROC is not very sensitive to the length of its EMA or ROC parts. You can calculate a 13-day EMA of closing prices and then apply a 21-day Rate of Change to it. Some traders calculate the Rate of Change of prices first and then smooth it with a moving average. Their method produces a much jumpier indicator, which is less useful than S-ROC.

Crowd Behavior:

An exponential moving average reflects the average consensus of value of all market participants during the period of its window. It is like a composite photograph that reflects major features of the market crowd rather than its fleeting moods. S-ROC compares each reading of an EMA to a past reading from your selected period of time.

It compares the average mass consensus today to the average consensus in the past. S-ROC tracks major shifts in the bullishness and bearishness of the market crowd.

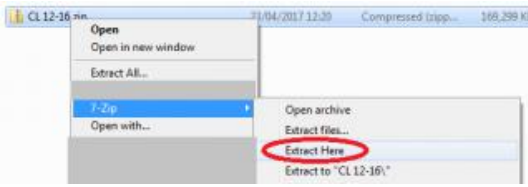

Trading Rules:

Changes in the direction of S-ROC often identify important market turns. Upturns of S-ROC mark significant bottoms, and its downturns mark important tops. Divergences between S-ROC and prices give especially strong buy and sell signals.

1. Buy when S-ROC turns up from below its centerline.
2. Sell when S-ROC stops rising and turns down. Sell short when S-ROC turns down from above its centerline.

3. If prices reach a new high but S-ROC traces a lower peak, it shows that the market crowd is less enthusiastic even though prices are higher. A bearish divergence between S-ROC and price gives a strong signal to sell short.

4. If prices fall to a new low but S-ROC traces a higher bottom, it shows that the market crowd is less fearful, even though prices are lower. It shows that the downside pressure has lessened, even though the market has fallen deeper than before. A bullish divergence gives a strong signal to cover shorts and buy.
