💻 **Supply Demand Zones for NT8 (MTF)**   [⬇ Download]   ★★★★★

The indicator plots supply and demand based zones from various time frames on the chart. It also adds a context menu item to the default Ninjatrader context menu to hide and show active and broken zones.

🚩 🏳 ⭐

secondsperbar [Download] ★★★★★

Simply totals the seconds required to draw a bar. Designed to be used with non-time based bars. Includes 2 horizontal reference lines, for example can have the 1st line represent 60 seconds (1 minute) and 2nd line set to 180 seconds (3 minute). Bars change to red if the number of seconds exceeds your desired Maxsec threshold, for example turns bars red if 120 seconds (2 minutes) is exceeded. Includes ability to draw a SMA of the time as well that defaults to a 5 period.

Thank you for updating. I really like this tool for syncing my various tick charts.

Big Candle v1.0 [Download] ★★★★

Big Candle v1.0

Identify unusually large price movements. If the range for the bar is outside of the standard deviation then the bar gets highlighted. There are also options to draw arrows on your main chart, and trigger alerts.

Really good at warning you of large movements triggered by news.

Lines on the indicator show you the average range, and how much range deviates from that average. Basically if that bar is above the top line it will be highlighted. Try different values for the periods and deviation factor to get the movements that you want highlighted.

I recommend using the plots on the indicator to help get the settings that you want, and then resizing the panel to hide the plot. Then just rely on the arrows and alerts.

Files can also be obtained from Github:
https://github.com/twdsje/Ninjatrader-scripts/blob/master/ExportNinjaScript/BigCandle.zip

Thanks a lot.

The 'Squeeze' V1 cloned for NT8b13   ⬇ Download

The Squeeze V1 cloned for NT8b13

This is a 'clone' 😵 of the infamous squeeze.

Find included a **chart** and a **market analyzer version**.

I have upgraded the original with new features:

* Instead of the standard multiplier setting I have replaced it with a use tick size option.
* Gapless option.
* Histogram:
Select between EMA, DEMA and TEMA for the histogram.
Set the MA and linear regression lengths separately.
Opacity.
* Paint bars added.
* Auto width adjustment option to adjust the width to the chart bar width.

The indicators have public properties for you to access in a strategy or the analyzer:

* Histogram value.
* Histogram direction: AboveUp = 2, AboveDown = 1, BelowUp = -1, BelowDown = -2
* Squeeze boolean: Squeeze or not to squeeze, that is the question 😊
* Number of bars: How many bars ago an event happened (including the current bar).

Download the analyzer template here. Copy and paste to your NinjaTrader/Templates/Market Analyzer folder.

Once imported you will find the indicators within Sim22>Gapless.

If you would like to see more indicators uploaded I would encourage you to do the same.

Ed's Levels Histogram V2.3 Updated   ⬇ Download

Ed's Levels Histogram V4V2.3 Updated

This is a port of Ed's Levels V4 from NT7.

Shows a histogram of the bid-ask levels, as appears on the DOM display.

Please see here for the Eds levels thread and my latest beta update (V4V4.2). This update will hopefully reduce multi-threading issues.

The options are self explanatory, however, you can adjust the positioning of the plot by setting "Buffer Right" and "Margin %".

I have added some more features including:

* A vertical column showing the current Bid/Ask pressure.

* A vertical column showing the current bar delta.

* Triangle symbols showing the current average of the bid and ask. (These fill if the average is > 1st standard deviation of the other).

* Standard deviation coloring.

More...

Caveat:

Occasionally when starting with market replay an error is printed, although in practice this rarely occurs and generally works seamlessly.

Symbol name ⬇ **Download** ⭐⭐⭐⭐⭐

Just something simple but helpful.
Display the symbol name on your chart.

* Choose the size, color and opacity of the text, with an option to set the size to 'auto' which adjusts to your panel height.

Thanks very useful.

WorldClock for NT8 ⬇ **Download** ⭐⭐⭐⭐⭐

This is version 1.0 developed on NT8 RC1.

I had the need for an application to just show times in different time zones. The ones I found online either cost money, didn't work on Win10, or simply did more than I needed. So I created one for NT since that's the only place I really use a world clock.

This NT AddOn allows up to 5 times to be shown. The text boxes allow a city or whatever to be entered. The time zone drop downs allow you to select the time zone. And the font boxes allow you to change the style.

The elements are saved to the workspace upon save, so you don't have to re-enter them when you close and open the workspace. Once you are done setting up the clocks, you can resize the window to show only the clocks and not the settings.

The WorldClock is added as a menu item to the "New" menu in the NT control center box.

This is my first AddOn, I think I've covered all the bases, if you encounter any bugs or have enhancement suggestions, I'm all ears, please PM me.

⭐⭐⭐⭐
Thanks, will dL this. By any chance can you add seconds?

More...

Colour Time Bands ⬇ **Download** ★★★

This indicator was provided elsewhere on the forum (thanks very much) and will show up to 3 different coloured backgrounds to the chart for different time zones - such as RTH / ETH and so on.

However, you (someone?) may want to fix these bugs: 1. When I close Ninja and re-open it disappears and needs to be re-loaded onto the chart; 2. I can't "save template"; 3. I would like to be able to treat it as a 24hr clock, in other words - if I enter 16:00 to 10:00 it should shade the entire overnight session. Rather, these indicators seem to get stuck at midnight and hence you need a few bands (so I can work around this if I need to).

Thank you !

More...

Chart Notes ⬇ **Download** ★★★★

This is simply a NT8 port of the Chart Notes control that I downloaded from futures.io.

I simplified it, in that there are now one set of parameters for each corner of the chart where text is possible. In addition, the string[] parameter did not work in the property grid. Switched to a normal string with a multiline editor.

Details: Chart Notes

Minor problem: for some strange reason, the ENTER key does not work in the multiline editor, so it is not possible to add additional lines of text. For the moment I just work around this by adding a few empty lines and later using a very brute force (dumb) approach to strip the empty lines. Works for the moment.

Must reference the assemblies: System.Design and System.Drawing.Design. These are needed to use the multiline input controls in the property grids.

Version 2.0
