🖥 **CSI V1**   [⬇ Download]   ★★★★★

This indicator is inspired by Pete from JigSaw Trading. He likes to call it the Cumulative Sheep Index, but it actually compares volume on the current bar to the average volume for the same time of day, calculated over the last X number of days.

You can set the number of days and use it on bars of any duration. I have no idea what it will do with non-time-based bars, so be prepared for it to blow up, if you try that.

Please be aware that the smaller the bar duration and the larger the number of days being averaged, the longer it'll take to complete the plot. 1-min bars and 60 days, for example, take several minutes to complete.

There is an option to have some of its data sent to the Output Window, so you can assure yourself it's working, in case you choose bars and days that take a very long time to calculate.

Yours to download.

Elliot Wave Drawing tool (Updated)   ↓ Download   ★★★★★

Custom drawing tool which allows you to draw Elliot Waves in NT 8
Supported waves are:

12345
ABC
ABCDE
WXY
WXYXZ

For each wave you can select if you just want to see the labels, or also the wave lines itself and
the degree of the wave.

After installing you can find the elliot wave tools under the drawing tools menu.
Note you can assign keyboard shortcuts to any of the elliott drawing tools using the tools->Hot Keys menu.

28-10-2018: Updated.. fixed memory leak and some other small changes

Measured Move Drawing tool (Updated)   ↓ Download   ★★★★★

This is a simple custom drawing tool for drawing measured moves as described in Trading The Measured Move by David Halsley

The drawing tool allows you to simply draw the measured move from 0-> 100% -> 50% -> to -23.6%

After importing, you should see a new menu item 'measured move' in your drawing tools.
Select it, draw the 3 lines and voila ;-)

28-10-2018: fixed some small issues

THANKS 😊

🖥️ **agDELTAs visualization 2 - update**   ⬇ **Download**   ⭐⭐⭐⭐⭐

I forget to mention in agDELTAs visualization 2 post that I use different time frame
in input parameter for indicators

Usually it 3 times longer time compare to original (1 min chart - 3 min for indicators etc)

Its make indicators more smooth

See attached image

Hey do the delta indicators only work with NT lifetime license to access orderflow? I'm no

t seeing anything. Is there a way to make it work on a free NT8?

🖥️ **agDELTAs visualization 2 - how to use**   ⬇ **Download**

Due on people interest to my agDELTA Visualization indicators I decided to publish some tips how to use it
In agDELTA - control points - cross above/below zero line and picks where indicator change direction
agDELTAmax and agDELTAmin - control points - picks and distance from ZERO line
Please see attached chart

For your convenience I attached indicators to this post

Best Regards

AG

agDELTAs visualization   Download ☆☆☆☆☆

This is a package of 3 Order Flows indicators - DELTA, DELTA MAX, and DELTA MIN
for Volumetric chart
Its help visualize who dominate the market and possible turning points
first indicator is a delta and just show
delta position per bar
Second - MAX DELTA
Third - MIN DELTA

To compare position of Delta Max to Delta Min you can see turning points or decrease/increase in move
(please be aware that Delta MIN is negative indicator and then it far from ZERO then negative force is more)

I use it with combination with other indicators to confirm turning point

Many Thanks to Ninja Trader Support Team !!!!!!

Best Regards

Beautiful, testing now. How should we report any problems we find it with?

Market Replay CL 10-18 (NT8)   Download

NT 8 Market Replay data for CL

Contract: CL 10-18

Download instructions:

dowload and unzip file in NT 8 replay folder
Documents\NinjaTrader 8\db\replay
The file will create a folder with the relevant front month and
a series of .nrd files inside (one per day)

Make sure to use the "extract here" function as shown, and not the "Extract to" function, to avoid the creation of a folder within a folder.

Details: Market Replay CL 10-18 (NT8)

Thanks

Note: the archive contains only the dates with the most volume for this contract, meaning, this is data relevant only to when the contract becomes the front month.

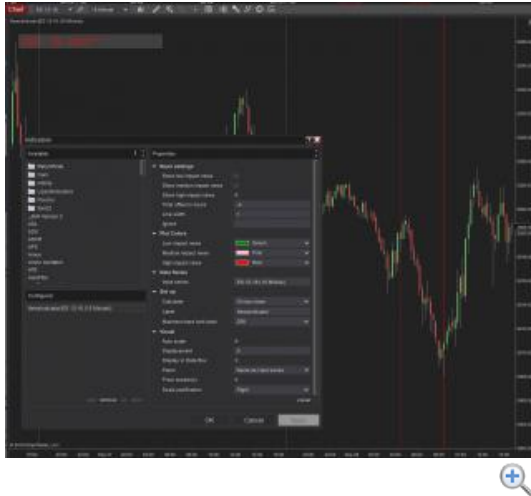

⭐ 📰 **News indicator (Updated)** [⬇ Download] ⭐⭐⭐⭐⭐

Winning Entry October 1st, 2018 to November 1st, 2018 [2 votes]

This indicator downloads news from [forexfactory](#) and display's it on your chart.
News is displayed in the upper left corner and is also shown as vertical lines on your chart.
You can choose if you want to show low, medium and/or high impact news
The time used is GMT. you can set a time offset in hours to adjust it to your own timezone
Furthermore you can ignore news for specific currencies (see the forex calendar). e.g. NZD will hide any NZD related news

30-10-2018: v1.1
- added option to hide the topleft table
- fixed bug that newsindicator disappeared after restarting ninja

📄 **Price line alert indicator** [⬇ Download] ⭐⭐⭐⭐⭐

This indicator allows you to place price alerts in a very simple way.

- Add the indicator to your chart(s)
- Place one or more **horizontal lines** on your chart on the places where you would like an alert
E.g. near S&R levels or fib. levels
- Next when price crosses one of these lines you will get an audible alert

You can place as many lines as you like, and if you want to change one.. simply drag it up or down to its new price.
But please note.. it only works with a **horizontal line**, not with any other drawing element(s)

--- updated ---
Uploaded new version which source code.

Regression Channel (amaRegressionChannel) ⬇ Download ★★★★★

Version 1.1 September 9, 2018

The **Regression Channel** already comes as a NinjaTrader default indicator. However, the NinjaTrader default indicator comes with a few limitations, which are adressed by this indicator:

- The default indicator calculates the regression channel from the last bar loaded by OnBarUpdate(). When the chart scrolled back horizontally, the regression channel remains in its future position until it drops out of the chart.
- The default indicator does not allow for calculating the linear regression channel a few bars ago and then project the channel lines forward until the current bar.

This version of the indicator has the two issues addressed:

- The regression channel is calculated from the last bar shown on the chart and will adapt its position accordingly when you scoll back the chart horizontally.
- You may enter an offset and calculate the regression channel a few bars ago. The regression channel will then be extended until the last bar shown on the chart.

Repainting behavior: All regression channels - whether linear or polynomial - belong to the class of repainting indicators. All regression channels are retrofitted to the selected lookback period. The repainting can be easily observed with this indicator when scrolling horizontally. The indicator comes with an option to display the regression bands. The regression bands show the trace that the regression channel has painted on the chart without repainting any prior bars.

Public DataSeries: The indicator comes with four additional public DataSeries that can be accessed via the strategy builder.

- Normalized slope - This is an output which returns the slope in synthetic degrees. The slope has been normalized by dividing it by the square root of the average true range and then applying the arctangent.
- NormalizedChannelWidth - This series returns the normalized channel width around the regression line and may be used as a measure of non-directional volatility.
- RegressionTrend - The regression trend holds the value + 1 for an upsloping regression line and -1 for a downsloping regression line.

Market Analyzer Columns: The indicator comes with three separately coded market analyer columns which allow for displaying normalized slope, normalized channel width and the regression trend on the market analyzer.
